Chennai

Varchini Devi K | LinkedIn

SKILLS

Web Technologies:
HTML, CSS, Java script, Typescript, Angular, React, Next.js, Bootstrap, AJAX

NET Technologies:
C#, VB.NET, ASP.NET Web Forms, ASP.NET MVC, .NET Core (including .NET 8), Web API, ADO.NET, Entity Framework Core, LINQ

Database:
SQL Server, Postgres, Mongo DB, DB2

Cloud:
Microsoft Azure, AWS

Version Control Tools:
GITHUB, SVN

IDE:
Visual Studio, VS Code, SSMS , PgAdmin

Other Tools:
AQT,UCD,Swagger,Postman, Reflection Workspace

SUMMARY

Senior Software Engineer with 7+ years of experience building and sustaining high-performance, security-sensitive enterprise platforms. Strong expertise in C#, ASP.NET Core/.NET 8, Web API, and cloud-native architectures, with hands-on experience in digital forensics, data integrity, encryption, and secure data pipelines. Proven ability to modernize legacy .NET Framework systems to .NET 8, debug and troubleshoot complex production issues across distributed systems, and deliver resilient, scalable solutions. Experienced in developing modern front-end applications using Angular and React/Next.js, integrating with secure RESTful APIs, with exposure to macOS-based workflows and Apple APIs in cross-platform environments. Adept in Azure cloud services, CI/CD pipelines, and Agile practices, with a consistent record of ownership and high-impact delivery.

WORK EXPERIENCE

Exterro R&D Private Ltd

Senior Software Engineer - AUG 2024 - Present

- Contributing to FTKC, a security-critical digital forensics platform supporting the full investigative lifecycle, with strict requirements around confidentiality, integrity, and auditability of evidence.
- Developing and sustaining core platform modules using C#, ASP.NET/.NET, Web API, Angular 14, EF Core, ADO.NET, LINQ, and SQL Server, ensuring reliability, scalability, and maintainable design.
- Leading migration from .NET Framework to .NET 8, resolving breaking changes, refactoring legacy components, modernizing APIs, and improving performance to align with long-term support and platform sustainability.
- Integrated Apple APIs and macOS/iWork document handling, enabling secure, browser-based review of macOS artifacts and demonstrating exposure to macOS-based workflows.
- Troubleshot and supported issues related to macOS-originated evidence and Apple-specific formats, collaborating with cross-functional teams to resolve compatibility and processing issues.
- Building and maintaining endpoint-adjacent data collection features integrating with Google Drive, OneDrive, network shares, mobile devices, Windows/Linux /macOS systems, Gmail, Outlook, and Exchange, handling diverse data sources and OS-level constraints.
- Engineered an end-to-end mobile data collection module, automating job orchestration, secure TCP/IP-based data capture and transfer, progress tracking, and encrypted output generation, with a focus on robustness and fault tolerance.
- Integrated with Microsoft Graph, Google APIs, and Export APIs, troubleshooting complex ingestion issues across cloud and on-prem environments in collaboration with cross-functional teams.
- Implemented encryption and certificate-based security workflows to preserve forensic data integrity and comply with internal and external security standards.
- Enabled automated entity extraction and classification (people, emails, keywords, metadata), supporting deeper analysis while maintaining traceability and correctness of extracted data.
- .Designed Angular-based UI components for evidence review, filtering, tagging, and entity linking, collaborating closely with backend services to ensure consistent API contracts and error handling.

Bug Tracking Tools:
Jira, Azure Boards

Methodology: Agile

AI Tools:
Github Copilot, Claude Code,Azure AI Studio (prompting & experimentation)

Containerization & DevOps:
Docker, Azure Kubernetes Service (AKS), CI/CD pipelines using Azure DevOps and Jenkins

Platforms:
Windows, Linux, macOS (integration-level exposure)

ACHIEVEMENTS

- Drove modernization initiatives by learning and adopting new frameworks and cloud services beyond assigned responsibilities.
- Recognized consistently for high-impact delivery, ownership, and client satisfaction, including 15+ internal excellence awards and multiple performance recognitions.
- Awarded Best Employee and Bright Beginning Award for outstanding contributions and early project leadership.
- Trusted by managers and clients for reliability, collaboration, and on-time delivery across complex engagements.

EXPERTISE

RESTful APIs & Microservices – secure, scalable, and high-performance enterprise integrations

Cloud Solutions on Azure – App Services, Function Apps, Durable Functions, Service Bus, Key Vault, Blob Storage, Cosmos DB

- Developed and optimized complex SQL stored procedures and data models, improving correlation accuracy and reducing processing time by ~35% through query tuning and backend optimization.
- Actively involved in production support and issue resolution, debugging complex scenarios across services, data pipelines, and integrations, and contributing to a sustaining-engineering mindset. Worked in an Agile, globally distributed team, participating in sprint planning, reviews, and retrospectives, while maintaining strong ownership of deliverables and code quality

Wipro Limited

Senior Software Engineer - FEB 2022 - Jul 2024

Halliburton

- Developed and enhanced digital oilfield solutions for drilling data processing, asset tracking, and job scheduling, improving operational efficiency.
- Built RESTful APIs and microservices using .NET Core, C#, and Entity Framework; designed Angular 14 dashboards for real-time telemetry and operations.
- Integrated React/Next.js frontends with .NET-based REST APIs, handling authentication, error handling, and versioned API contracts.
- Designed and implemented secure, event-driven workflows using Azure Blob Storage and Durable Orchestrations, where file drops triggered automated pipelines for decryption, duplicate detection via hashes, data validation, and splitting, followed by structured insertion into SQL Server tables.
- Leveraged Managed Identities (system-& user-assigned) for seamless authentication between Function Apps, Blob Storage, Cosmos DB, and Key Vault, eliminating plain-text secrets and connection strings.
- Built and optimized Cosmos DB container models to support UI data retrieval with efficient partitioning, indexing, and request unit (RU) tuning for cost-performance balance.
- Implemented Azure Service Bus topics and subscriptions to notify downstream services and trigger email workflows, with retry policies and dead-letter queues ensuring fault tolerance.
- Developed Azure Functions with action triggers to orchestrate sequential SQL data insertions, coordinated with durable orchestration for consistency and reliability.
- Enhanced monitoring and diagnostics using Azure Application Insights, configuring custom telemetry, dependency tracking, and KQL queries for proactive performance analysis.
- Secured application secrets and certificates using Azure Key Vault, integrated with Managed Identity for access control, ensuring compliance with enterprise security policies.
- Centralized environment-specific configuration and feature toggles through Azure App Configuration for streamlined deployments.
- Utilized Azure Storage Explorer and Storage Emulator for local testing and troubleshooting, simulating production scenarios in controlled environments.
- Delivered mobile-support APIs for well data access and collaborated with drilling experts to translate requirements into scalable software solutions.
- Built and supported Dockerized services deployed on Azure Kubernetes Service (AKS) to ensure consistent environments and reliable deployments

HP Marcoms

- Led end-to-end development of 3+ applications, managing requirement analysis, design, coding, testing, deployment, and production support independently.
- Mentored team members, ensuring Agile compliance and timely sprint deliveries.
- Built dynamic web apps with ASP.NET MVC/Core and React, enhancing responsiveness and reducing load times.
- Designed and optimized complex SQL queries, stored procedures, and UDTs; reengineered grid functionalities for multi-row operations to boost efficiency.
- Developed secure REST APIs for external data integration, implemented SSL certificates, and ensured HTTPS compliance.
- Upgraded apps to .NET 4.8 and migrated OS from Windows Server 2012 → 2019, handling full environment setup and validation.
- Migrated applications to AWS EC2, achieving 40% cost reduction and improved scalability.

RESTful APIs & Microservices – secure, scalable, and high-performance enterprise integrations
Database Design & Optimization – SQL Server, ADO.NET, Entity Framework Core, LINQ, MongoDB, DB2

Authentication & Security – OAuth 2.0, OpenID Connect, JWT, certificate-based encryption

Agile/DevOps Practices – CI/CD pipelines (Azure DevOps, Jenkins), IIS management, Application Insights monitoring

AI-Assisted Development – Leveraging tools such as GitHub Copilot and Claude code for code scaffolding, refactoring, optimization, unit test generation, debugging support, and technical documentation.

EDUCATION

B.E Electrical and Electronics Engineering

Mepco Schlenk Engineering College (Autonomous), Sivakasi

LANGUAGE

- English
- Telugu
- Tamil

- Managed and tuned IIS for high-traffic apps, improving response time by 30% and enforcing security protocols.
- Automated CI/CD pipelines via Jenkins and Azure DevOps, streamlining deployments.
- Managed Agile project workflows using Azure Boards, improving team collaboration and project tracking.
- Managed over 100+ scheduled jobs in Tidal, optimizing execution times and dependencies to ensure seamless 24/7 operations, reducing system downtime by 40%.
- Delivered client-specific features and fixes rapidly, coordinated UAT, and secured production sign-offs.
- Conducted code reviews, unit testing, and partnered with cybersecurity to maintain a 100% clean security record.
- Used Git for branching, merging, and conflict resolution; collaborated with global teams for successful deliveries.

Cognizant Technology Solutions

Associate - FEB 2018 - Feb 2022

Travelers

- Led full SDLC phases—requirements gathering, analysis, design, coding, testing, deployment, support, maintenance, enhancements, and documentation—using Visual Studio .NET, MongoDB, DB2, and SQL Server per client standards.
- Designed and developed new UI screens from scratch using ASP.NET, C#, VB.NET, ADO.NET, Web API, JavaScript, SQL Server, DB2, and MongoDB.
- Built an Adverse Subrogation Screen for the insurance domain, improving efficiency in managing complex legal cases.
- Led full SDLC phases—requirements gathering, analysis, design, coding, testing, deployment, support, maintenance, enhancements, and documentation—using Visual Studio .NET, MongoDB, DB2, and SQL Server per client standards.
- Designed and developed new UI screens from scratch using ASP.NET, C#, VB.NET, ADO.NET, Web API, JavaScript, SQL Server, DB2, and MongoDB.
- Built an Adverse Subrogation Screen for the insurance domain, improving efficiency in managing complex legal cases.
- Utilized MongoDB for dynamic case data storage and created high-performance Web APIs for data operations, reducing case access/update time.
- Secured APIs with OAuth and JWT; tested using Postman and Swagger.
- Integrated a secure online payment system for Travelers Insurance to streamline claim payments and refunds.
- Developed AJAX-based dynamic content loading and validation to enhance user interaction.
- Implemented queries using LINQ, built WCF services, and developed complex ASP.NET Web Forms using C# and .NET Framework 4.0.
- Extensively used ADO.NET for high-volume data retrieval, storage, and manipulation.
- Managed version control with GitHub and SVN; automated CI/CD pipelines with Jenkins.
- Integrated Urban Code Deploy with Jenkins for end-to-end build, test, and deployment automation, increasing release frequency.
- Designed and executed test strategies across multiple environments, identifying and resolving integration, functional, and usability issues before release.
- Conducted live demos for business users during development to ensure feature alignment before deployment.
- Participated in project planning, design/code reviews, security requirement incorporation, and data flow validation.
- Reported assignment statuses to stakeholders and collaborated with cross-functional teams to ensure timely delivery.
- Engaged in all Agile ceremonies—sprint planning, story creation, retrospectives, and estimation—while managing multiple priorities under aggressive deadlines.
